1. The following is an examiner's statement of reasons for allowance: the prior art does not anticipate or render obvious a method for performing pre-MRI screening for ferromagnetic foreign bodies in the eyes by rotating the eye and thus moving any ferromagnetic particles which may be present to modulate the magnetic susceptibility signal from the ferromagnetic object, with a system comprising a source-sensor unit including a field generating element and magnetic sensor, and canceling the signal due to the applied magnetic field at the location of the magnetic sensor by the relative arrangement of the applied-field generating element and the magnetic sensor in the source-sensor unit. Leuthold et al. (5,494,035) teach a method of performing pre-MRI screening for ferromagnetic foreign body detection in a region of interest but do not teach said region to include the eyes and do not teach the step of canceling the signal due to the applied magnetic field.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
